

## MultiExCom – Product brief

### **MultiExCom Solution**

#### **Background**

The financial industry is facing challenges as a result of increased market volatility and intensified regulatory procedures.

Maintaining home-grown approaches for connecting applications diverts skills and time away from higher-level business concerns and opportunities.

MultiExCom shields applications from the complexities of communications protocols and data networks and enables the handling of huge amounts of market data.

#### **What is MultiExCom?**

MultiExCom is a complete solution for connecting your applications to any system using standard or proprietary protocols for exchanging financial information.

Using MultiExCom provides easy, secure and reliable integration of networking interfaces into your business solution.

MultiExCom eliminates the need for dealing with the complexity of network communication and recovery.

A massive load is put on applications by the huge amounts of information generated by algorithmic trading. MultiExCom has advanced filtering functions allowing applications to focus on relevant messages only and thus relieve the load.

MultiExCom has routing capabilities allowing messages to flow to one or more destinations based on message contents.

#### **Who uses MultiExCom?**

MultiExCom is developed by nikuda to enable banks, brokers and vendors to connect to Exchanges and information vendors.

---

## MultiExCom – Product brief

---

MultiExCom is developed in close interaction with customers.

### ***Benefits of using MultiExCom***

Using MultiExCom moves focus from technical issues to business requirements.

- Achieve fast ROI by
  - Reducing transaction load on existing applications
  - Leveraging existing assets and using existing skill sets
- Adjust to dynamic business requirements
- Reduce initial and ongoing development costs by decoupling connectivity and integration logic.

Free systems integrators and application developers to apply their skills to higher-level integration challenges with bigger benefits to IT departments and the business.

### **What is nikuda aps?**

The nikuda aps Company was formed by seasoned IT professionals with broad experience from the last 20 years of electronic trading. This includes software development and consultancy for some of the largest financial institutions of Scandinavia as well as for exchanges and clearing houses.
